Introduction & Warranty Outline

THANK YOU for purchasing the Carbatec model SS-400C, SS-530C or SS-760C scroll saw. This scroll saw has been carefully tested and inspected before shipment and if properly used and maintained, will provide you with years of reliable service. To ensure optimum performance and trouble-free operation, and to get the most from your investment, please take the time to read this manual before assembling, installing and operating the unit.

The manual's purpose is to familiarise you with the safe operation, basic function, and features of this scroll saw as well as the set-up,

maintenance and identification of its parts and components. This manual is not intended as a substitute for formal woodworking instruction, nor to offer the user Instruction in the craft of woodworking. If you are not sure about the safety of performing a certain operation or procedure, do not proceed until you can confirm, from knowledgeable and qualified sources, that it is safe to do so.

Once you've read through these instructions, keep this manual handy for future reference.

WARRANTY

All component parts of the Carbatec Scroll Saw (distributed in Australia & New Zealand by Maxis Distribution Pty Ltd), are carefully tested and inspected during all stages of production, and each unit is thoroughly inspected upon completion of assembly. Because of our commitment to quality and customer satisfaction, Maxis agrees to repair or replace, within a period of 3 years from date of purchase, any genuine part or parts which, upon examination, prove to be defective in workmanship or material. In order to obtain this warranty, all defective parts must be returned to Maxis. Repairs attempted without our written authorisation will void this warranty. Disclaimer: The information and specifications in this manual pertain to the unit as it was supplied from the factory and at the time of printing. Because we are committed to making constant

improvements, Maxis reserves the right to make changes to components, parts or features of this unit as deemed necessary, without prior notice and without obligation to install any such changes on previously delivered units. Reasonable care is taken at the factory to ensure that the specifications and information in this manual corresponds with that of the unit with which it was supplied. However "after factory" modifications may render some or all information in this manual inapplicable to your unit. Further, as several generations of this scroll saw and several versions of this manual may be in circulation, if you own an earlier or later version of this unit, this manual may not depict your unit exactly. If you have any doubts or questions contact your retailer or our support line with the model and serial number of your unit for clarification.

Warning

The symbols below advise that you follow the correct safety procedures when using this machine.

Fully read manual and safety instructions before use

Ear protection should be worn

Eye protection should be worn

Dust mask should be worn

Keep hands away from moving parts and cutting area

To help ensure safe operation, please take a moment to learn the machine's applications and limitations, as well as potential hazards. Maxis Distribution Pty Ltd, or its authorised resellers, disclaim any real or implied warranty and is not liable for any injury that may result from the improper use of its equipment.

1. Be sure to read, understand and follow all safety warnings and instructions in the supplied Operator's Manual.
2. Do not operate the saw when tired, distracted, or under the effects of drugs, alcohol or any medication that impairs reflexes or alertness. Stay alert! Give your work your undivided attention.
3. Keep the work area well lit, clean and free of debris. Cluttered areas and benches invite injuries.
4. Keep children and shop visitors at a safe distance while operating the saw; do not permit them to operate the scroll saw.
5. Childproof and tamper proof your shop and all machinery with locks, master electrical switches and switch keys, to prevent unauthorised or unsupervised use. Fine particulate dust is a carcinogen that can be hazardous to health. Work in a well ventilated area and use a dust collector whenever possible.
7. Wear approved safety glasses, dust mask and nonskid footwear. Do not wear loose clothing, gloves, bracelets, necklaces or jewellery while operating the saw. Keep long hair contained by wearing protective hair covering.
8. Be sure all adjustment tools, wrenches or other clutter are removed from the machine and/or the table surface before operation. When not in use, tools should be locked-up in a dry place, out of children's reach and away from flammable substances.
9. Keep hands well away from saw blade and all moving parts. Use a brush, not hands, to clear away chips and sawdust.
10. Be sure that the saw blade is properly installed, and in the correct cutting direction, before operation. Always use a clean, properly sharpened blade. Dirty or dull blades are unsafe and can lead to accidents. Also, be sure the blade has gained full operating speed before beginning to cut.
11. Do not push or force wood into the blade. The saw will perform better and more safely when working at the rate for which it was designed. Do not use for purposes not intended.
12. Avoid working from awkward or off balance positions. Do not overreach while cutting; keep both feet on floor. Never lean over or reach behind the blade and never pull the work piece through the cut from behind.
13. Never stand or lean on the saw. Serious injury could occur if the unit is tipped over or if the blade is unintentionally contacted.
14. Use of parts and accessories NOT recommended by Maxis Distribution may result in equipment malfunction or risk of injury.
15. Never leave the machine unattended while running or with the power "ON".
16. Always turn off and disconnect from power source before servicing or changing accessories, blades, bits, and cutters, or before performing any maintenance or adjustments.
17. Make sure that switch is in the "OFF" position before plugging in the power cord. Do not use the saw if the power switch is defected, have defective switches replaced by an authorized service centre.
18. Make sure saw is properly grounded. If equipped with a three prong plug it should be used with a three-pole receptacle. Never remove the third prong. Avoid body contact with grounded surfaces (e.g. pipes, radiators, stoves, refrigerators).
19. Repairs to the saw should only be carried out by qualified people using original spare parts. A guard or other damaged part should be properly repaired or replaced by an authorized service centre.
20. Inspect power cords and extension wires periodically. If damaged, have them repaired by an authorized service facility. Never yank cords and wires and keep away from heat, oil, and sharp edges.
21. This tool is for indoor use only. Do not expose to rain or use in wet or damp locations.

Additional Safety Instructions **Specific to this Scroll Saw**

Because each shop situation is unique, no list of safety guidelines can ever be complete. The most important safety feature in any shop is the knowledge and good judgement of the user. Use common sense and always keep safety considerations, as they apply to your individual shop situation first and foremost in mind. If you have any doubts about the safety of an operation you are about to perform: STOP! Do not perform the operation until you have validated from qualified individuals if the operation is safe to perform and what is the safest method to perform it.

1. Material hold-down must be properly set and remain in position during use.
2. Never reach under the table when operating or make any adjustments while the scroll saw is running.
3. Secure the saw to the work bench with clamps or mounting hardware.
4. Where possible, use clamps or a vice to secure your workpiece. It is safer than using your hand.
5. Do not lift or carry the saw by the upper arm.
6. Make sure blade tension is properly adjusted.
7. Avoid awkward hand positions where a sudden slip could cause a hand to move into the saw blade. Do not place fingers or hands in the path of the saw blade.
8. When removing short workpieces, or cleaning up around the table, be sure that the switch is in the OFF position and that the blade has come to a complete stop.
9. Never turn the saw ON before making sure that the table is clear except for the workpiece and related feed or support devices for the operation planned.
10. Check for proper blade size and type.
11. Do not attempt to saw stock that does not have a flat surface unless a suitable support is used.
12. Turn off motor if the material resists being backed out of an incomplete cut. Use appropriate speed for applications.
13. CAUTION: Some wood contains preservatives such as copper chromium arsenate (CCA) which can be toxic. When cutting these materials, extra care should be taken to avoid inhalation and to minimize skin contact.
14. Always use a dust mask and safety glasses when sawing.
15. Keep guards in place and in working order.
16. Make sure your fingers do not contact the terminals of the power cord plug when plugging in or unplugging the saw.
17. Never overfeed or force work into the blade.
18. Check for alignment and binding of all moving parts, broken parts, mounting and any other conditions that may affect the saw's operation.
19. Keep handles dry and free from oil and grease.

To avoid electrical shock, ensure machine is properly grounded. Do not operate in damp conditions. Disconnect from power supply before servicing. Replace fuse with the same type and rating only - 5 Amp.

Be sure to read and understand owner's manual before operating.

Before connecting the machine to the power source, verify that the voltage of your power supply corresponds with the voltage specified on the motor I.D. nameplate. A power source with greater voltage than needed can result in serious injury to the user as well as damage to the machine. If in doubt, contact a qualified electrician before connecting to the power source.

This tool is for indoor use only. Do not expose to rain or use in wet or damp locations.

GROUNDING INSTRUCTIONS

In the event of an electrical malfunction or short circuit, grounding reduces the risk of electric shock. The motor of this machine is wired for 230V single phase operation and is equipped with a 3-conductor cord and a 3-prong grounded plug to fit a grounded type receptacle, **a**

Note: The use of an adaptor plug is illegal in some areas. Check your local codes.

DO NOT MODIFY THE PLUG PROVIDED.

If it will not fit your receptacle, have the proper receptacle installed by a qualified electrician.

CHECK with a qualified electrician or service person if you do not completely understand these grounding instructions, or if you are not sure the tool is properly grounded.

EXTENSION CORDS

USE ONLY 3-WIRE EXTENSION CORDS THAT HAVE 3-PRONG GROUNDING PLUGS AND 3-POLE RECEPTACLES THAT ACCEPT THE TOOLS' PLUG. REPAIR OR REPLACE A DAMAGED OR WORN POWER CORD OR PLUG IMMEDIATELY.

If you find it necessary to use an extension cord with your machine make sure the cord rating is suitable for the amperage listed on the motor I.D. plate. An undersized cord will cause a drop in line voltage resulting in loss of power and overheating.

Identification of Main Parts & Components

ON/OFF Rocker Switch (A)
Speed Control Dial (B)

NVR power isolating switch

- | | |
|--|---------------------------------|
| a VARIABLE BLADE SPEED CONTROL KNOB | i TILT HANDLE |
| b ON/OFF SWITCH | j ANGLE INDICATOR |
| c UPPER ARM TENSIONER | k ANGLE ADJUSTMENT SCALE |
| d BLADE CLAMP | l MOUNTING HOLES (4) |
| e BLADE | m BLOWER |
| f WORKPIECE HOLD DOWN | n UPPER ARM |

UNPACKING

Carefully unpack and remove the scroll saw and its components from the box and check for missing or damaged items as per the list of contents below.

Once the parts have been removed from the packaging, you should have the following items:

LIST OF CONTENTS	QTY
A - SCROLL SAW	1
B - POWER CORD (attached)	1
C - 3 MM ALLEN KEY	1
D - BLADE	1

Installation & Assembly

Unscrew the 4 shipping bolts and remove the saw from the protective plywood shipping base. For your convenience this scroll saw is shipped from the factory partially assembled and requires only minimal assembly and set-up before being put into service.

 **Before starting the assembly, make sure that the switch is in the "OFF" position and that the power cord is unplugged. Do not plug in or turn on the scroll saw until you have completed the assembly and installation steps described in this section of the manual.**

The unit should be installed on a flat, sturdy and stable surface able to support the weight of the machine and the workpiece with ease.

Never install the machine over the edge of a table or workbench.

Installation & Assembly

Saw guard assembly

Slot the guard clamping arm (d) through the pre-drilled hole in the hexagon clamp (c). Insert the hexagon clamp (c) into the brackets hexagon recess, place the washer (b) over the hexagon clamp thread and secure using the butterfly clamping knob (a).

NOTE: DO NOT OVERTIGHTEN otherwise you may strip the thread

Saw guard assembly (d) assembled

Mounting to a work surface

It is strongly recommended that you mount the machine to a workbench or to a purpose built stand, a pad between the scroll saw and the workbench/stand is also recommended to reduce vibration.

Drill four 8mm holes in your workbench/stand and secure using nuts bolts washers (Not Included).

NVR Switch assembly

A power NVR switch has been attached to isolate the scroll saw while not in use. The green light indicates mains power is connected.

- Plug the unit in to mains power, turn on then press the 'GREEN' button {A} to put power to the scroll saw.

- Ensure the speed dial setting is on slow, then press the rocker switch {B} to 'ON' - setting 'I' to start the saw.

- Once operation has been completed, press the rocker switch {B} to setting 'O' OFF, followed by the scroll saws NVR power using the 'RED' button {C}.

Choosing & Installing a Saw Blade

Blade Selection

Blade selection is dependent on the type and thickness of the material being cut, but is also a matter of experience and personal preference. There are numerous types of blades available on the market specifically suited for various cutting applications such as metal-cutting and spiral blades which cut in all directions. Try test-cutting with a sample of each to determine which blade works best for you with different materials. Replacement and specialty blades can be purchased from a variety of sources. Ask your local tool or scroll saw dealer for suggestions for **unpinned 5" scroll saw blades** based on what is available in your area.

Some general guidelines to consider when choosing blades:

- Wide, thick blades with coarse teeth are suited to cutting straight lines and sweeping curves, but will not turn tight corners. They will cut aggressively and leave a fairly smooth finish, but may leave burn marks if the work piece is turned too tightly.
- Narrower, thinner blades with finer teeth will cut more slowly, but will turn much tighter corners for cutting very intricate work. They will impart a very smooth, burnished finish that requires no sanding.
- Consider material thickness when selecting blades. Ensure that a minimum of two or three teeth are in contact with the workpiece at all times. For example, when cutting 1/8" thick material, use a blade with a minimum of 16-20 teeth per inch.

SKIP TOOTH

Regular evenly spaced tooth pattern. Considered the most common of scroll saw blades, they are available in the widest range of sizes and provide a good combination of fast cutting action with good chip clearance and a relatively smooth finish.

BLADE	WIDTH	THICKNESS	TEETH/INCH	
#2/0	.022	.010	28	For extremely intricate sawing. Very tight cuts in 1/16" - 1/4" wood veneer, plastic, hard rubber, pearl, etc.
#0	.024	.011	25	
#2	.029	.012	20	For tight radius work with thin materials, 3/32" - 1/2" wood veneer, wood, bone, fiber, plastic, etc.
#4	.035	.015	15	
#5	.038	.016	12.5	For close radius work in materials 1/8" or thicker. Good for sawing hard and soft woods, bone, horn, plastic, etc.
#6	.041	.016	12.5	
#7	.045	.017	11.5	Popular sizes for cutting hard and soft woods, 3/16" up to 2". Also cuts plastic, paper, felt, bone, etc.
#9	.053	.018	11.5	
#11	.059	.019	9.5	
#12	.062	.024	9.5	

REVERSE TOOTH

Reverse teeth at the bottom of the blades prevent splintering to the underside of the workpiece.

BLADE	WIDTH	THICKNESS	TEETH/INCH	
#2/0R	.026	.011	28/20	Same applications as Skip Tooth blades.
#2R	.029	.012	20/13	
#5R	.038	.016	12.5/9	
#7R	.049	.018	11.5/8	
#9R	.054	.019	11.5/8	
#12R	.062	.062	9.5/6	

DOUBLE TOOTH

Fast, clean cutting and very efficient chip clearance.

BLADE	WIDTH	THICKNESS	TEETH/INCH	
#1D	.026	.013	30	Same applications as Skip Tooth blades.
#3D	.032	.014	23	
#5D	.038	.016	16	
#7D	.044	.018	13	
#9D	.053	.018	11	
#12D	.061	.022	10	

Choosing & Installing a Saw Blade

Installing or changing blades

Always turn off and unplug the machine before removing, handling or changing blades.

1. Remove an installed, worn or broken blade by flipping the blade tension lever forward (position ①), then loosening the thumbscrews **a** and **b** on the upper and lower blade mounts **c** and **d**. (See Fig. 1 to 3)
2. Remove the blade.
3. With the blade teeth facing forward, slip one end of the blade through the hole in the table and fit each end of the blade into the corresponding upper and lower blade mounts, then tighten the thumbscrews firmly by hand only – do not use tools.
Note: Overtightening the blade clamp thumbscrews can cause premature wear to the blades gripping surface and result in blade slippage.
4. Push the blade tension lever back (position ②) to apply tension on the blade.
5. Tighten grub screw **e** to adjust for any slack in the blade mount, if required. Do not over-tighten!

Helpful Hints on blade tension: Determining correct blade tension is somewhat subjective. It is learned through experience and is somewhat dependant on personal preference. A properly tensioned blade will last longer and be much less likely to break prematurely. If the blade tension is too loose, you will notice that the blade will have a tendency to drift or slip off-line when cutting and you may also experience excessive vibration or unusual noise. A blade that is too tight will break prematurely.

Assuming the blade has been properly installed in the blade mounts, when the blade tension lever is pushed fully back towards the rear of the saw, the blade should be properly tensioned.

Test the blade tension by lightly plucking on the blade, like you would a guitar string, with your finger. If the blade is tight and tensioned correctly you will get a clear and even note. If so, you are ready to proceed to operating and cutting with the saw.

On/Off switch

A simple, dust protected rocker style on/off switch **a** is located on the top of the saw. (See Fig. 5)

Adjusting the blade speed

This Scroll Saw is equipped with a variable blade speed control which allows you to select or fine-tune to the exact blade speed required (from 400-1550 strokes per minute) for best results based on the type and thickness of material and type of blade being used.

The blade speed control knob **b** is located on the top of the machine. (See Fig. 5)

- To increase blade speed, turn the control knob clockwise.
- To decrease blade speed turn the control knob counter clockwise.

Operating Instructions

Blade speed selection is subjective and is dependant on a variety of factors: type and thickness of material being cut, type of blade being used, feed rate, required finish quality as well as experience, personal preference and comfort level of the user. There are no hard and fast rules. Be patient – practice and experience will be your best teacher.

Here are some general guidelines to consider when selecting/adjusting blade speed:

- For best results and smoothest most efficient cutting, always select the highest blade speed that you are comfortable using based on your experience and skill level.
- Generally speaking, harder or denser workpiece material requires slower blade speeds.
- Slower speeds also work better with very thin blades, or when cutting most metals as well as for brittle or delicate material such as fine veneers.
- Some wood species will have a tendency to burn quicker at higher blade speeds. To avoid additional sanding later, reduce blade speed and feed speed at the first signs of burn marks on the workpiece.

Adjusting the Blower

This Scroll Saw is equipped with a built-in blower to help clear cutting dust from the workpiece surface in front of the blade and on any reference lines. Adjust the blower tube **a** as needed to point the nozzle at the blade to set it at a comfortable distance so as not to obstruct your hand movement as you work. (See Fig. 6)

Workpiece Hold-Down

The workpiece hold-down **b** (See Fig. 6) can be adjusted to assist in preventing the blade from lifting the workpiece up from the table during the cut. Loosen the thumbscrew **c** to set the height to your convenience based on the thickness of the workpiece. Before cutting, test to make sure that the hold-down is not adjusted too tightly to the workpiece or that it obstructs the movement of the workpiece.

Adjusting the Oscillation (Front to Back)

Place a 90° square up against the back of the blade. The blade movement can be set between course and fine for different cutting tasks. This can be adjusted by rotating the motor within its' mounts. Loosen the motor mounting cap head bolts, (Fig A) enough to be able to rotate the motor - this can be quite stiff to turn. Start the machine and run at approximately 1/4 speed. By rotating the motor, (Fig B) and carefully observing the blade you will be able to see the blade changing its setting. The finest setting is where the blade moves vertically with the least amount of movement backward and forwards horizontally (Fig C). This should also be where the machine vibrates the least. When you have the setting where you wish it to be, re-tighten the motor mounting bolts.

Top & Bottom Blade holder Alignment

If the blade is out of alignment please follow the procedure below for adjusting the top and bottom blade holders:

Place a 90° square up against the side of the blade (Fig A). Using a 4mm Hex key (a) adjust the grub screw and butterfly nut (b) until the blade is parallel with the square (Fig B).

(See Fig C and D for detailed examples).

Operating Instructions

Basic 90° straight or curved cuts

All cuts made with the blade at 90° to the table follow the same basic principals. Start by marking or transferring your pattern or reference lines onto your workpiece.

Note: The SS-760C has a 760mm throat that allows for a workpiece of up to 760mm to swing completely around without hitting the back of the saw. If necessary, please rough-cut your workpiece down to a workable size before starting any intricate work on the scroll saw. This practice also applies to the SS-400C and SS-530C

1. With the saw turned off and unplugged, install the appropriate blade for the type of material to be cut and the type of cut to be made (Refer to the section "Choosing and Installing a Saw Blade" on page 9).
2. Adjust the workpiece hold-down and the blower nozzle to your liking.
3. Turn on the saw and set the speed controller to the desired blade speed.
4. With your fingers holding the piece firm to the table, and using your thumbs for directional control, (See Fig #7 & 8) feed the workpiece into the blade using steady, even pressure.
5. Make sure that the blade is cutting on the waste side of your reference line and adjust feed direction slightly as needed to compensate for blade drift.

Cutting Tips: To stay in control on tight curve cuts, slow down your feed rate as needed to allow the blade teeth time to make the cut. Avoid coming to a complete stop whenever possible as this can leave burn marks on the workpiece and also makes it more difficult to get the piece re-started and moving through the cut again. Avoid forcing through a curve cut as this can cause the blade to twist and cut off-track or may even cause the blade to break.

Fret Cutting

Fret or inside cutting is an operation that can only be performed on a scroll saw. Fret cutting involves drilling a small guide or pilot hole through the interior of your pattern on the workpiece, then disconnecting one end of the blade which is fitted through the guide hole and re-connected; essentially using this guide hole as the starting point to cut out the piece from within. A typical example of fret cutting would be removing the center portion of lettering. (See Fig. 9)

This scroll saw is a great tool for fret cutting, because, unlike most scroll saws it allows you to raise the upper arm with the blade attached, line up the guide hole in your workpiece with the hole in the table and then lower the arm while guiding the blade through the hole from above (see step by step instructions below). This can be a very useful time saving feature, particularly for intricate or complex fret designs that can involve dozens or even hundreds of holes.

Note: The upper arm locks in place in the raised position for easier insertion of the blade through the hole in the workpiece and for easier blade changes.

1. With the saw turned off and unplugged, install the appropriate blade for the type of material to be cut and the type of cut to be made (Refer to the section "Choosing and Installing a Saw Blade" on page 9 of this manual).
2. With your pattern or design transferred onto the workpiece, drill a guide hole in the inside waste portion of the workpiece. (See Fig. 10) Make sure that the hole is large enough for the blade to fit through.

Helpful hints on drilling guide holes: If multiple fret cuts are required on the same workpiece, drill all of your required guide holes before taking the workpiece to the scroll saw. This will keep you from going back and forth from the saw to the drill press.

To prolong blade life by limiting unnecessary cutting, drill your guide holes as close as possible to your reference lines. (See Fig. 11)

3. Release tension on the blade by flipping the blade tension lever forward.
4. Loosen the thumbscrew on the lower blade mount, located under the table, to release the blade from the mount.
5. Raise the upper arm assembly which will lift the blade up through the hole and above the table.
6. Position the workpiece on the table so that the guide hole lines up with the hole in the table.
7. Lower the arm assembly with one hand while guiding the blade through the hole in the workpiece and table.
8. Re-install the bottom end of the blade in the lower blade mount and tighten the thumbscrew to secure the blade in the lower blade mount.
9. Flip back the blade tension lever to re-tension the blade and test the blade tension as described in "Installing or Changing Blades" section of this manual.
10. To begin cutting follow the same steps as described in "Basic 90° straight or curved cuts" section on page 9 of this manual.

To reduce the risk of injury, always turn off the saw and wait for the blade to come to a complete stop before reaching in to remove waste material from a fret cut.

Angle or Bevel Cutting

One of the unique features of these three model scroll saws, is the ability to tilt the head of the saw in order to make angle or bevel cuts. The table and the workpiece always stay horizontal (parallel to the floor) while the blade tilts, keeping your hands in the same comfortable cutting position as they would normally be for regular right angle cuts. Because you are not fighting gravity or working with your hands or wrists bent in awkward positions, it can be a huge advantage and makes it easier and safer to make accurate bevel cuts.

The blade tilt controls are located under the table at the front saw. (See Fig. 12)

To tilt the blade for bevel cutting:

1. Release the locking lever **a** by turning counter-clockwise.
2. Turn the tilting handle **c** left or right to set the blade to the desired angle.

Note: Push in and hold the spring loaded indexing pin **b** to locate the following common angles: 90°, 45°, 30° & 22.5° both left and right.

When tilting the blade to the left at extreme angles, it may be necessary to remove and reverse the lower blade mount thumbscrew assembly in order to maximize clearance under the table. (Fig. 13 shows the lower blade mount in default position and Fig. 14 shows it reversed).

To avoid kinking or damaging the blade in the holder, when making adjustments make sure the set screw **d (opposite the thumbscrew **e**) is threaded in to the holder to protrude slightly beyond the blade slot **f**. (See Fig. 15)**

3. Tighten the locking lever **a** to secure the blade at the desired angle.
4. To begin cutting follow the same steps as described in "Basic 90° straight or curved cuts" section on page 11 of this manual. Fig. 16 shows the scroll saw in position for bevel cutting.

Fig. 12

Fig. 13

Fig. 14

Fig. 15

To reduce the risk of injury, always turn off the saw and wait for the blade to come to a complete stop before reaching in to remove waste material.

Fig. 16

Handling

CAUTION

DO NOT LIFT SAW BY THE UPPER ARM.

Maintenance

- Always release tension on the blade when the saw is not in use.
- Clean the saw regularly with a soft bristle brush or by vacuuming to keep cutting dust from accumulating.
- An occasional application of a light dab of grease on the front and rear trunnions (See Fig. 17) will keep the tilting mechanism working smoothly. If you find the tilting mechanism becoming more difficult to operate, thoroughly wipe off any built-up cutting dust on the trunnions and re-apply a little grease.
- The bearings in the drive mechanism are sealed and permanently lubricated and do not need to be oiled or greased.

Squaring the blade to the table

Depending on frequency of use and how much the tilting mechanism is used, normal wear will over time cause the blade to come slightly out of alignment with the table. Periodically check the blade is square with the table. When needed, adjust as described in the following steps to re-align the blade square to the table.

1. Turn off and unplug the saw.
2. Using the blade tilt controls at the front of the saw, set the blade angle to read 0 - which is 90° vertical to the table.
3. Set a machinists square on the table and against the blade to verify the blade angle. (See Fig. 18)
4. If the blade angle requires adjustment loosen the 4 bolts in the front trunnion **a** as well as the 4 bolts on the rear trunnions **b**.
5. By hand, move the entire head to bring the blade square to the table.
6. With the blade square to the table hold the head in position and re-tighten the bolts on the front and rear trunnions.

Upper arm tension adjustment

Over time and with normal wear, the upper arm tension will require adjustment to hold the arm in the raised position.

To adjust the upper arm tension:

1. Loosen the lock nut. (See Fig. 19)
2. Adjust the tension screw until the arm stays in raised position.
3. Re-tighten the lock nut.

Changing the Fuse

The SS Series Scroll Saws take a 5 Amp 20 x 5mm glass fuse. Follow the instructions below on how to change the fuse.

1. Unplug the scroll saw from the mains.

2. Unscrew the fuse cap to the rear of the scroll saw and remove the 5 AMP fuse.

3. Insert a new 5 AMP fuse into the end cap holder.

4. Re-insert the fuse assembly and finger tighten.

Specifications

Code	SS-400C	SS-530C	SS-760C

YEAR

WARRANTY

WARRANTY

1. WARRANTY

- (a) We warrant that this Maxis Distribution product will be free from defects caused by faulty workmanship or faulty materials for a period of 3 years from the date of sale.
- (b) This warranty is in addition to other rights and remedies you may have under a law in relation to the goods.
- (c) This warranty does not apply in any of the following cases:
 - (i) defects arising from:
 - (1) fair wear and tear;
 - (2) corrosive atmosphere;
 - (3) damage or injury caused by deliberate act, lack of care or failure to comply with the recommended care and maintenance for the goods;
 - (4) improper use of the goods;
 - (5) alterations or repairs (not made by us) to the goods;
 - (ii) defects arising from an event outside of our control such as fire, flood, earthquake or other natural calamity, motor vehicle or other accident, strike, civil unrest, terrorism or war;
 - (iii) to accessory items such as after-market jigs, accessories or other items which are not sold or serviced by us and which are not sold with or were not included with the main unit purchased; or
 - (iv) to wearable parts such as drive belts/shafts, bearings, bandsaw tyres, motor brushes, blades or abrasive belts/discs or other cutting or machining implements.
 - (v) damage caused to any electrical component, where connected to a power supply outside the country for which it was designed (namely Australia or New Zealand).
- (d) If this warranty applies and you have complied with the procedure below for making a claim, we will, at our election, either repair the goods (or those parts of the goods recognised as defective) or will provide a replacement within a reasonable time at our expense.
- (e) If this warranty applies, the procedure for making a claim is:
 - (i) you must contact us by email;
 - (ii) you must include in the email the following information:
 - (1) a copy of the order or receipt for the goods;
 - (2) the serial or batch number printed on the machinery manufacturing plate; and
 - (3) a detailed description of the fault and how and when it arose; and
 - (iii) if the fault is a type covered by this warranty, we will then make arrangements with you for the return of the goods to us (for repair or replacement) at our cost using our transport providers or we may decide to attend at your premises to repair or replace the goods.
- (f) Our liability (and that of our resellers) under this warranty is wholly limited to repair or replacement of the goods (or those parts of the goods recognised as defective) in accordance with the procedure above and you have no right to other compensation, costs or damages under this warranty. But this does not mean that you may not have other rights under a law in relation to the goods.
- (g) If following our inspection of goods returned by you under this warranty it is found that this warranty does not apply and you are not otherwise entitled to repair or replacement by us, you must, if requested by us, reimburse our costs including parts, labour and freight.
- (h) This warranty is not transferable and only the person who purchased the goods may make a claim.
- (i) Where the goods have been exported outside Australia or New Zealand, the Company may not require the Purchaser to return any allegedly faulty or defective Product for evaluation. However, the Company has the right to request the return for evaluation at purchasers cost.

2. STATUTORY NOTICE

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.
